

Key & interpreting the allergy data

'N/i' (Not Indicated) means that the component is not part of the product. However, we cannot guarantee that the product is '100% free from' that component because of the risk of unexpected cross-contamination before it reaches our depot, or in-house kitchen.

'Yes' indicates that the product contains that component & therefore is not suitable for a customer with an allergy or intolerance to it.

'C' means that this component is present in the manufacturing site/factory/supply chain & therefore it could pose a slight risk of cross-contamination with the product.

The **'Yes'/'No'** in the column entitled 'suitable for vegans' details information supplied by the product manufacturer. It does not take into account the in-house storage/preparation methods where cross-contamination issues could render the information void.

'Data unavailable' is where ingredient detail for the item/dish is currently unavailable from the supplier & will be added onto the table upon obtaining it. Or because it is bought at local level in-house.

Additives are artificial antioxidants, colours, flavourings, preservatives, sweeteners, flavour-enhancers & sulphites.

The **Treenut** column indicates the presence of the following; almonds, brazils, cashews, hazelnuts, macadamias, pecans, pistachios, walnuts & their respective derivatives.

NB: We have taken all reasonable steps to ensure that this table is accurate. However, due to the risk of unexpected inclusion and possible product substitution of product we unfortunately cannot guarantee that the specifically identified products do not contain 'nuts' &/or ingredients derived from 'nuts'. Your statutory rights are not affected.
